

## The Hub

### Glenthorne High School, Sutton

Construction of a new two storey hub building situated in the heart of a large active secondary school, in addition we refurbished significant elements of the surrounding buildings.

The hub links together three existing teaching blocks and contains a new entrance, reception, library, offices and classrooms. We also completed a new external courtyard.

The new building was formed using both concrete and timber frame, a brick and rendered facade and fibreglass roof. Internally, the concrete columns and slabs, services on view and glass fire screens create a stylish industrial quality.

There were complexities associated with this project, but we thrive on such challenges and all were overcome with minimum fuss.
